

Full-Frame Replacement System

The Restorations Full-Frame Replacement System takes replacing old windows a step further, thoroughly restoring the structural integrity of the window opening while installing an energy efficient, low-maintenance replacement window.

This existing window and its original wooden frame is in poor condition, despite requiring high maintenance for years. Many old wood windows also have issues with dry rot and, in a typical installation of a new replacement window, the dry rot might be covered over with aluminum trim coil rather than replacing the whole window system, providing a larger, darker moist environment in which the fungus will thrive.

Investing in replacement windows should last a lifetime, but simply installing a new window into an existing wooden frame isn't always a comprehensive solution. It's not just the window itself that's old - the surrounding wood frame has aged along with the window and has been exposed to weathering and damage.

With the Restorations Full-Frame Replacement System, an entirely new window opening and window is installed - and up to 30% more visible glass is gained versus a typical vinyl window replacement.

Full Frame Replacement Procedure

- Existing old window and surrounding wood is removed
- The opening is prepared for the new window
- Proper flashing is installed
- A custom-sized window - or multiple windows - with exterior brickmould and sill is installed as one unit
- No rotted wood remains

This cross-section of the window frame shows the beautiful detail of the integrated exterior brickmould, as well as the polyurethane insulation standard in all Restorations brand windows.

This Painter's White Restorations double hung window was installed as a Full-Frame Replacement utilizing Restorations exterior brickmould option.
